

WEB PROGRAMMING

Day 1 — Introduction

Welcome to Web Programming! In this course we will cover the three core languages of the web: HTML, CSS, and JavaScript.

Visit <https://github.com/abhiverse01> for the course repository.

Contact: instructor@university.edu for questions.

The Big Picture

Three Languages

Web development relies on three core languages working together: HTML for structure, CSS for presentation, JavaScript for behavior.

Two Sides

Every web application has a client side (browser) and a server side. We will focus on the client side in this course.

Before We Begin

Make sure you have a modern browser and a code editor installed.

Core Terminology

Term	Definition
HTML	HyperText Markup Language — the standard language for creating v
CSS	Cascading Style Sheets — controls the presentation and layout of w
DOM	Document Object Model — a programming interface for web docume
Attribute	A property that provides additional information about an HTML elem
Client	The user's browser or device that requests and displays web pages
Browser	Software application used to access and view web pages on the inte
Frontend	Everything the user sees and interacts with directly in the browser
Rendering	The process of converting HTML/CSS/JavaScript into a visual displa

Tools You Use Every Day

Text editors, browsers, developer tools, and version control systems.
